Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-40 and 42-43, drawn to an apparatus or system for analyzing a specimen, classified in class 250, subclass 288.
- II. Claim 41, drawn to a method for controlling a laser beam, classified in class 372, subclass 15.

The inventions are distinct, each from the other because:

The inventions I and II are distinct, each of the inventions I and II recites limitations not recited in any of the remaining inventions. The differing limitations would appear to make the inventions I and II patentably distinct from one another, i.e. a reference that anticipates or makes obvious one of the invention I or II would not by itself anticipate to make obvious the other invention.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classifications, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

A telephone call was made to Monte L. Falcoff on 7/2/04 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one

or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
